

# Hidden Government "100-F Documents" That Let You Predict Which Stocks Will Go up or Down

Discover how one small group of Americans uses government-mandated "100-F Documents" to easily predict gains or losses for any household-name stock in America...

On at least 58 different dates, each year...

And how you can now use these same "secret" documents to post returns as high as 400 - 600% over the weeks ahead

Dear Reader,

They're just people like you and me doing this.

Some are retired. Others are still working.

They're in their 30s and 40s. Or 60s and older.

What they've all discovered is a surprising way to use government-mandated "100-F documents" *...to reliably predict where and how far Wall Street's best-known stocks could go.*

What's more, they're using that information to post 400 - 600% gains on those moves. Surprisingly fast. And even in down markets. Over and over again.

Is what they're doing illegal?

It can sure sound like it, since they're often using information *not immediately* available in the mainstream press. Yet the U.S. government is behind this strategy 100%.

- Two days after seeing the government "100-F document" filed on Oct. 24, 2007...52-year-old David O'Connor was able to use what he knew to sock away \$41,891
- On Feb. 21, 2008, a certain "100-F document" was filed in Washington. Five trading days later, 47-year-old Gerald Lavine pocketed profits of \$51,783
- Roger Barnes of Colorado got more than a glimpse of the "100-F document"

filed on Oct. 31, 2007. Six trading days later, he locked in a stunning \$237,000 gain.

And the surprising truth is anyone can do this.

I lead a small group of individuals who are proving this right now.

Every week, this group and I share details pulled from what I collectively call "100-F documents" -- even though most people know these documents by a few other names. I'll show you what we're finding in these documents in just a second.

I'll also show you how we're piling up winning market moves using a special system I've developed to take the best possible advantage of the details we discover.

For example, as I write this, *we just locked in a 216% gain.*

Bruce Bedford, one of the members of my group, just shot me a note...

***"Dan, I sold my position today at \$14...up 194% from \$4.75 in 42 days...I'm delighted with the outcome...More, please!"***

Believe me, we're just getting started.

But as I said, these quietly filed government-mandated "100-F documents" have a long history of revealing hidden details and golden opportunities. With some very impressive results...

- Bob Gerry used an options move, five days after a key "100-F document" filing, to lock in a one-time gain of \$254,944
- H.B. Smith waited only 15 trading days after he saw another "100-F document" filing...to pocket \$84,000 on the company that signed the papers
- Cindy Feedback, an accountant in Houston, made \$173,518 just 13 trading days after the company she was watching filed its "100-F documents" in D.C.

What's also surprising is how *consistently* effective this can be. In fact, even during the current calendar year, you can find at least 58 specific dates tied to specific "100-F"-driven opportunities.

Tuesday, July 15...Tuesday, July 29...Wednesday, July 30...Monday, Aug. 11...Thursday, Aug. 14...Friday, Aug. 29...Tuesday, Sept. 2...the list goes on.

On or very close to these dates, publicly traded companies across America are *required* by federal law to quietly file these confessional "100-F Documents"... full of buried facts and deep secrets the same companies don't dare share in their press releases and public puff pieces.

**“Even the most raging bull needs to know this valuable technique...”**

*Jim Rogers, billionaire investor*

And reading these documents can be like reading a blueprint of tomorrow's

financial headlines, every single one of them revealing things that could start driving the share price in one direction or another, provided you know how to read the details.

What I've created is a five-step system for doing exactly that. In a moment, I'll show you how it works. Including how you could use what you'll discover to make -- over and over again -- as much as double, triple, or even five or six times your money.

*But first, you're asking...*

## **What Exactly Is a "100-F document"?**

Imagine hearing the secret confessions of top CEOs...

Sitting behind closed doors at their boardroom jawing sessions.

Imagine knowing -- before *millions* of American investors -- exactly what the top-dog insiders at America's best and biggest companies are about to do with their money.

Normally, that's privileged information.

But on certain dates -- at least *58 times per year* -- companies across America are ordered to file some of their deepest business secrets in these "100-F documents."

- Two weeks after a certain company's "100-F documents" got filed in Washington, Ray Barker was able to make an options trade that made him \$138,000
- Aaron Broadwater, 61 years old and already once retired, added \$135,000 to his nest egg...just 4 days after seeing another company's carefully filed "100-F documents"
- On the day 49-year-old Matt Roche saw this "100-F document" filed, he quickly made an options trade on the move that netted an amazing \$352,299.

The thing is, what you see companies reveal to the press is rarely as stark and honest as what you can pull from deep in the pages of these "100-F documents."

In fact, the gap between when they file these papers...and when the details get leaked to the press...can even give anyone a "loophole" opportunity to get the jump on opportunities, days before other investors.

As I'll show you in just a second.

*Some knowledgeable market pros even call these documents "prediction papers"...because they realistically expose many of the secret plans, risks, and challenges for a stock over the coming year...*

Why?

Because whereas company press releases get churned out by slick marketing pros...the "100-F documents" get filed under strict legal scrutiny. There's little

wiggle room for insiders and fat cats to fudge the truth.

Recent takeovers and mergers...secret business deals that have yet to happen...hidden company plans...big successes, mistakes, pending lawsuits...even executive contracts gone sour...they all come out in the wash when a "100-F document" gets filed.

When the news is good, insiders don't mind if you get to take a peek.

When the news is bad, they wish you couldn't. But by law, you get to anyway.

*And either way, you can turn that information into huge gains, once you know how.*

The five-step system I'll show you is one way to do precisely that. I believe it's the best possible way, too. With reduced risk and highly predictable results...to the tune of four or five times every dollar invested.

*Even if the company shares we're talking about are going down, rather than up.*

Let me show you what I mean...

## **Systematic "100-F" Return #1: 600%** **How a Bank's Reluctant Confession Could** **Have Made a Few Smart Americans Very Rich**

During the property boom, mega-bank Citigroup got cocky.

It loaded up on loans borrowers couldn't pay back. Then, based on the idea that housing prices don't crash, it packed up those loans...on the bet it could make billions *more* dollars trading them on Wall Street.

But it turned out Citigroup bet wrong.

As late as June 2007, you wouldn't have known it. Everybody figured Citi -- one of the world's largest banks -- had a pile of assets. That's what upper management wanted us all to believe, too.

At the time, Citi shares still traded above \$50.

*Which is why almost nobody knew Citigroup had secretly sat on a ticking time bomb...*

See, while the press spin is often polished and positive...the government-mandated "100-F documents" can reveal the truth. And in this case, that's exactly what happened.

I studied those same details, ran them through a five-step system I've developed for evaluating these kinds of opportunities, and then shot a message to a very small group of interested market players, saying...

*"This morning, Citigroup kicked off the third-quarter earnings season with a negative earnings preannouncement. Citi expects third-quarter net income will fall roughly 60% from a year ago, blaming 'dislocations in the mortgage-backed securities and credit markets, and deterioration in the consumer credit environment'..."*

*"I see a value trap in bank stocks, as most of the analysis I read doesn't extend much beyond the parroted mantra that 'Banks are cheap on a price-to-earnings and price-to-book basis.' Citi's earnings preannouncement is reminding the market that earnings and book value should be taken with a grain of salt"...*

By Oct. 1, 2007, Citi had already started to unravel. If you held shares, you braced for a wave of hurt. But anyone holding put options on the play could have turned sour grapes into a solid 600% return.

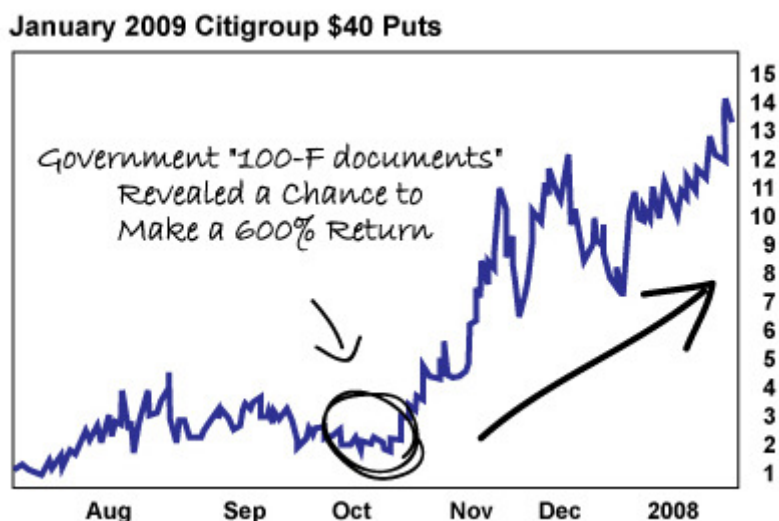

Options, of course, are a way for you to control a lot of shares of a stock at once...often at a much lower cost per share...and with potential gains as much as 10 or 15 times *bigger* than the move in the actual company shares.

When you think a stock is about to go up, you buy *call options*.

When you think a stock is about to plunge, you buy *put options*.

Making that call can be anyone's guess...unless you've got the power of what's revealed -- as required by law -- in the "100-F documents" I'm telling you about.

Take a look at this...

When I first applied my system and sent out my warning, it was available to only a very small group -- a handful, really -- and was not something I had a way to share with the general public.

But had you seen this disaster coming, your best move could have been to call your broker and ask for the January 2009 Citigroup \$40 put options. They would have cost you only about \$2 per share. And by January, you could have seen them soar past \$14.

**That's a gain of at least 600% in just over 90 days.**

*Here's another example...*

## **Systematic "100-F" Return #2: 633%** **The Little Detail That Turned a "Lemon" Stock Into Lemonade**

How many times have you bought a new stereo...a new television...a new laptop...or even something as simple as an iPod...only to have a salesman wave an "extra warranty" contract in your face?

Too often, I'm sure. And there's a reason.

See, some stores barely break even unless they can force lots of these extended coverage deals on their customers. That's how it was for nationwide retail chain Circuit City.

And you could see it, just by digging deeply enough in Circuit City's "100-F documents."

It was the detail even top execs ignored, however, when they tried to woo investors

with highly publicized "cost-cutting" layoffs. Wall Street watchers love cost cuts. And they pumped money into Circuit City's shares.

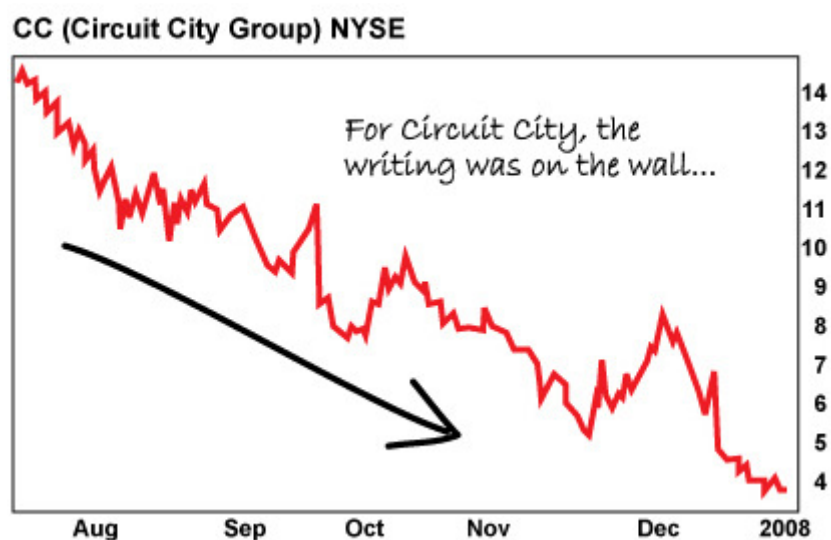

They started bidding up the share price -- from \$5 to over \$30 by March 2006. Circuit City fed the mania with \$1.2 billion in capital-wasting share buybacks. Then, in March 2007, Circuit City did it again...*cutting another 3,400 senior reps.*

What watchers didn't realize was that the "cost cuts" meant dumping the stores' high-pressure, commission-driven sales team...and replacing it with hourly wage teenage salesclerks.

You can guess what happened next.

Without the pros to push those high-priced warranties and flat-screen TVs, Circuit City's sales figures sank faster than a bag of wet diapers in a kiddie pool...*slamming Circuit City's stock.*

Here's what it looked like...

Too bad for you if you held shares.

But what if you could have seen this coming?

You could have taken a ride on the tidal wave for gains as high as 633%.

How? Everything you would have needed to know you could have found buried in the "100-F documents" Circuit City was required by law to file in Washington.

The system my group and I use is designed to filter for these details.

And one perfect move you could have made at that time might have been to call your broker and request the Circuit City January 2008 \$15 put options. It would have taken less than five minutes "work." And you could have paid just \$1.50 per share.

Here's what could have happened for you next...

January 2008 Circuit City \$15 Puts

By the beginning of 2008, you could have turned around and sold those same put options for \$11 per share...a gain of more than 633%.

*Here's another example...*

**Systematic "100-F" Gain: 597%**  
**Over 597% Gains in 60 Days,**  
**Even After "Missing Out"...**

During the property boom, E\*Trade must have gobbled up mortgage-related investments like candy. But any 4-year-old can tell you what happens when you gorge on candy.

You get sick.

That's exactly what E\*Trade did.

By 2005, the company actually made more on the mortgage investments than it booked in brokerage fees. There was no way this could last forever.

Anyone who looked at the "100-F documents" could see the pressure building. Sure enough, when property started to unravel, so did E\*Trade's bottom line.

*From June - October 2007, E\*Trade's highflying shares plunged from \$25 down to \$15...*

### ETFC (E\*Trade Financial Corp) Nasdaq GS

Even if you "missed out" on the first part of the move, you still could have jumped in by early October...to snap up the January 2008 E\*Trade \$15 put options.

They were going for just \$2.

Less than a month later, the "100-F documents" filed by E\*Trade got much worse.

It couldn't hide any longer just how much the value of the subprime loans on its balance sheet had fallen. And it was obvious to anyone who looked how much cash E\*Trade suddenly needed...just to stay in business!

That was perfect timing to step in and snap up the January 2008 E\*Trade \$15 put options.

*Here's what could have happened for you...*

### January 2008 E\*Trade \$15 Puts

By the end of December 2007, you could have walked away with another solid gain of more than 597%. But hang on. *Why do so many of these "100-F document" moves point toward stocks that go down...while their put options go up?*

The answer might surprise you...

## Why I Love "Crashers" Even More Than Stocks That Go Up

Don't get me wrong...

I'm no stranger to using this kind of deep research to find stocks that go up.

For years, I worked as a "detail man" and key researcher on a team that ran one of the world's 10 best-ranked high-end private mutual funds (you needed at least \$2.5 million just to open an account).

That fund averaged an incredible 17.6% compounded annual return from 1990 - 2005. That's unmatched by most of the 7,000-plus funds out there. And plenty of those gains came from playing the typical "long side" of the stock market.

But while I cut my teeth on that research, I learned something fascinating.

I discovered that there's a little-known "loophole" that you can use to play hundreds of opportunities many market amateurs regularly leave on the table.

A loophole that can let you make quite a bit of money by simply using a system like the one I've developed to help you find gains on the *down*, or "*short*," side of the market...

## The Little "Loophole" That Can Double Your Chances for Gains

See, study after study shows that when a company's "100-F documents" share good news, the top brass of the company can't wait for that information to get leaked to the press...even before the documents get filed in Washington.

But when the "100-F documents" expose bad news for a company's shares...company execs do the opposite, filing their legally required company plans and forecasts as quietly as possible...trying to not draw attention for as long as they can.

In other words, it can take as many as *four trading days or longer -- on average --* for negative "100-F document" details to show up in places like *The Wall Street Journal* and *Barron's*.

"[This strategy worked] like shooting fish in a barrel..."

*The Telegraph*

And according to those same studies, even though a handful of financial pros watch the filings to make their moves...the big jumps in share prices don't happen *until the details make it into the mainstream headlines*.

That means you and I get a window we can use to make big gains on the news.

## How Big a Window?

In October 2007, one University of California study -- backed by the bigwigs at Barclays' Global Investors unit -- revealed that the more complicated the "100-F document" filings, the more time you have to make your play.

Here's something else...

Another study, from Pennsylvania State University, found you could *track what the top dogs and insiders were doing -- almost like setting your watch -- around the filing dates of these secretive "100-F documents."*

Just look at some recent examples...

- On Sept. 5, 2007, shares of Krispy Kreme would have set you back \$6.26. Sounds like a bargain for a doughnut maker that once traded near \$50 -- but on Sept. 6, 2007, a "100-F document" filed in D.C. revealed it could go lower. And it did, sliding to \$3.24 just four days later
- For nearly 14 years straight, Starbucks shares looked like portfolio caffeine...soaring to \$41 per share. But a deeper look at the company's "100-F documents" revealed a slip in store traffic...and the steam was off the mug. By November 2007, shares hit \$24...when "100-F documents" filed on Nov. 15 and Nov. 29 exposed more bad news. By April this year, shares hit a low of \$15.66
- Blue chip giant General Electric was the way to make money from the early 1960s to July 3, 2000...when you would have paid \$58 per share. It's been down and dull for most of the years since, at about \$38 per share by April 1 this year. *On April 7, legally required "100-F documents" revealed news that sent shares falling to \$32 by April 14...and below \$30 by June 11, 2008.*

The gap in those moves in the share price is the "loophole" that opens up. It's your opportunity to move on the shares before the tide of market investors jumps on the same trend.

And as I said, you can do that a couple of ways.

One risky way to play downturns is to "short" the stock. That means you borrow shares you don't own and keep the difference between what they're worth today and the lower price you expect them to have in the future. The risk is you could get it wrong and the shares could go up. And there's no limit to how much you could lose.

*That's why I love to play these moves with put options, instead.*

With put options on these downside moves, you limit the risk to only what you decide to put in. What's more, it can cost next to nothing per share for the options play. That means less on the line. But it can also mean much bigger gains. How big?

Up to 10 and 15 times the move in the underlying shares.

And sometimes more.

*Imagine what you could have done, for instance, as those big stocks I just named dipped 48%...49%...and 62%. Put options on those moves might have given back as much as 480%...490%...620% or more.*

What's surprising is how easy it can be to do this for yourself.

I've developed a strategic five-step system for filtering out the best opportunities. One thing I'd like to do for you immediately is rush you my newest research report, which details the five steps and tells you more about how you can tap these same events for gains.

I call this report ***Five Steps to Lock in Triple-Digit Gains Even as Stock Markets Crash.***

I'll send you a copy at no charge. Free. You can download it after you read this letter, or I can put it in the mail to you immediately. Now, why would I want to do that?

## **Allow Me to Introduce Myself**

My name is Dan Amoss.

*Debt and credit risk analysis; total balance sheet review; interviews with not only the company's managers, but also customers and the competition; context review to find the "inflection points" for the company in the overall industry...*

Those kinds of things might bore you to tears.

But they fascinate me.

I even subscribe to a yawner of a magazine called Financial Analysts Journal.

No, it doesn't come with a centerfold or a free pencil sharpener.

Considering the fund I used to research for now manages close to \$1.55 billion, being that much in love with details pays off. It's also why I agreed to join the team over at Agora Financial, an international research group with over 119,000 paid-up subscribers and an estimated combined net worth of over *\$14.7 billion*.

But I couldn't bear to limit my recommendations to just simple "long" stock plays. Not when making money in the way I've shown you above has such a *long history* of making others rich...

- Joe Kennedy, father of President John F. Kennedy, used this same strategy to make the Kennedy family fortune...long before any of his sons even thought about getting into politics

- What's more, this same strategy for playing the downside of the market stands behind the top three most profitable market moves in history, plus 14 of the greatest stock market fortunes of all time
- Former waiter Jim Fisk got so rich doing this that Hollywood made a movie about his life
- Young Jay Gould used to sell hardware, until he used this strategy to become a multimillionaire - before his *21st birthday*.
- Market legend Jesse Livermore used this strategy to make \$250,000 in a single afternoon. He did it again a year later and made \$3 million. Over his lifetime, he piled up nearly \$100 million using this unique approach
- *Fortune* editor Alfred Jones launched the hedge fund industry when he founded a pool of investors who started doing this profitably back in the 1950s
- Quantum Fund founder and billionaire George Soros made \$1 million using this technique to play shares of Avon in the 1970s. He did it again to make \$1.1 billion -- in less than 24 hours -- playing for leveraged gains on a crash of the British pound. And he's used it to triple the size of his hedge fund in just five years
- Billionaire Paul Tudor Jones is famous for working the commodities market. But he also used this "crasher" strategy -- playing the 1987 market collapse -- to sock away \$100 million
- Even recently, three Goldman Sachs analysts played the downside of the crashing financial and banking stocks to haul in an incredible \$4 billion
- And 51-year-old Harvard grad John Paulson made what the Financial Times quotes one investor as calling "one of the greatest trades of all time" by playing leverage against the same crashing shares, *for a one-time take of close to \$12 billion!*

Naturally, anything this successful makes governments nervous. Which must be why they've tried *at least three times* to outlaw this way of making money.

But with the mandated filing of "100-F documents," not only is this strategy perfectly legal, but it's easier now than it's ever been. Especially with the help of the simple system I've developed. I can show it to you in the free copy of ***Five Steps to Lock in Triple-Digit Gains Even as Stock Markets Crash*** I want to send.

There's something more I'd like to do for you, too.

Every week, I do all this homework for a small group of interested individuals. I dig into the reports companies have to file. I also dig into their shareholder communiqués...between the headlines...and deep enough into the markets to find a steady stream of these kinds of money-multiplying opportunities.

I run everything I find through my five-part system. Then I share my research with

this small group every week in the alerts I send. Each alert is full of all of my analysis and my short, detailed, and easy-to-follow recommendations.

I'd like to start sending you these same valuable alerts every week. And as soon as possible, especially when you think about what some of America's top investors are already accomplishing right now, following this kind of market approach...

- Andrew L. from California just used this same approach to falling stocks to sock away gains of more than 1,000% in less than a year. Michael Brandt, also from California, just did this and made 300%
- J. Kyle Bass does this and has made back over 527%. He drives a \$200,000 Porsche and takes vacations on private islands. He says, right now, we're looking at a "once-in-a-lifetime, low-risk, incredibly high-reward" opportunity to put this strategy to work
- Daniel Loeb, a New York executive, says he's up "only" about 160% using this strategy so far. Of course, Loeb also manages \$5.7 billion. Imagine making 160% even on a pile of cash a fraction of that size...in a market that's leaving most amateurs *baffled* about what to do.

Again, I use a very careful five-part system to find my recommendations. I show you how it works in the free copy of ***Five Steps to Lock in Triple-Digit Gains Even as Stock Markets Crash*** I'll send, just as soon as you finish reading this letter and give me your permission.

And then I want to introduce you to the brand-new research service I mentioned.

I call it the ***Strategic Short Report***. This same meticulous five-step system is the core of how it works. But it shares all my other ongoing research too, just so you're never left wondering how I come to my recommendations. By the way, we even "beta-tested" this approach for six straight months, just to make sure it could work...and it passed the test with flying colors.

Even in today's trickier markets.

The good news is that not only does it work, but with the help of "100-F documents"...it has gotten a lot easier for the handful of people who follow my research to duplicate these same kinds of results.

*And as I said, every blue chip company in America is quietly forced by the U.S. government to reveal its secrets in these filed documents. When it has to reveal bad news, you can bet it doesn't exactly take out full-page ads in The New York Times.*

But I can still dig out the details for you.

Then I can show you how to easily turn what we find into gains many times bigger than moves in the underlying shares...with controlled risk...and a very easy price per share.

It's all detailed in your free copy of ***Five Steps to Lock in Triple-Digit Gains Even as Stock Markets Crash***. I'll rush you a copy as soon as you accept my special

invitation, at the end of this letter.

How well can this work?

## **Systematic "100-F" Gains: 400% The Fad Diet ... That Could've Given You Fat Gains of 400%**

Back in May 2006, Wall Street still loved NutriSystem Inc.

But I saw something different taking shape.

Looking deeper into NutriSystem's legally required "100-F documents," I could immediately tell that the company's business model was dangerously outdated for a newer, less-forgiving economy.

I sent an urgent alert to a small group of individuals...

*"NutriSystem Inc. has all the characteristics of a 'fad diet' rolled up into one convenient speculation... While I don't doubt that the service has produced incredible results for many satisfied clients, this business model is highly reflective of modern American prosperity and demand for convenience... [and] convenience will be near the top of the list of household budget cuts in harder times..."*

*"Concerns about operating expenses don't seem to be a factor, either... Wall Street is enamored with the idea that NutriSystem has a largely outsourced business model... However, the company cannot forever escape the new reality in energy pricing... Shipping costs will likely be headed up in the future."*

The insiders must have agreed. In just five months, they had dumped over \$100 million of their own shares. The company's CEO, a former dot-com entrepreneur named Mike Hagan, had cashed out over \$82 million of his own shares in less than a year.

*When the fat cats don't want to eat their own cooking, that's a bad sign.*

Take a look at what happened next...

NTRI (NutriSystem, Inc) Nasdaq GS

By 2007, the rest of the market started to wake up to the truth.

But you know how markets can be. Sometimes it's hard for market amateurs to let go of an idea. By September 2007 -- at \$55 per share -- it was clear NutriSystem was *still* flying too high.

*And it turned out that was the perfect moment to strike.*

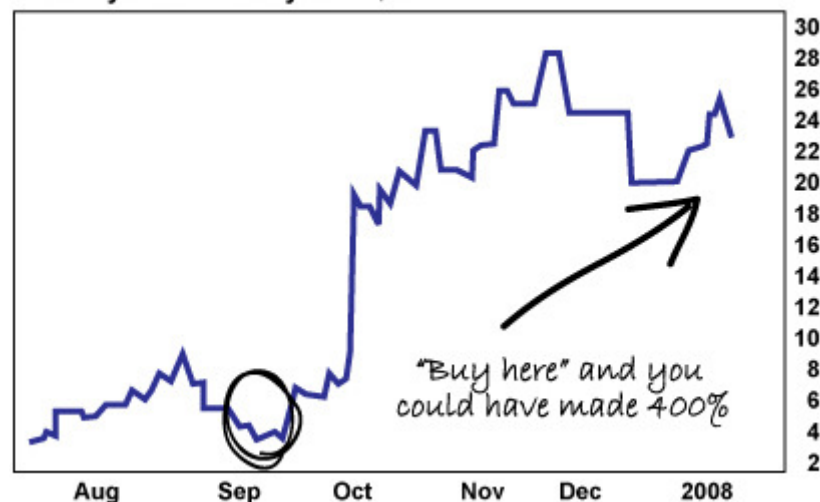

Your best move, looking carefully at the data, might have been the January 2008 NutriSystem \$50 put option.

You might have paid about \$5 per share to get in...and could have cashed out as high as \$25.

*That's a 400% gain.*

Here's what you could have seen happen...

January 2008 NutriSystem \$50 Puts

I'd love nothing more than to have you join the small, savvy group that gets my special opportunity alerts *every week* with my new research service, **Strategic Short**

**Report...**

## **Make Perfect Plays, Even in an Uneasy Market**

Just to give you some idea of how well this works when we put rubber to road, here's just a glimpse of what my small elite group of readers have seen so far...

- American Axle quietly squeezed in four "100-F" filings in Washington just before the Friday, May 30, 2008, deadline...and 4 trading days later, I was able to tell readers to lock in a 38% gain
- When I first saw TCF Financial's "100-F Documents," I could tell it was a turkey...even before it quietly disclosed some more bad news on May 2, 2008. Four days earlier, I had already shot out an alert to my readers, showing them how to play our put options on the shares...for a 97% gain
- When Systemax's first embarrassing "100-F Documents" came out, I called for another put option play...just ahead of the company's fishy accounting "adjustment." Anybody who followed it could have made gains of 178%
- The details this company buried in its "100-F Documents," filed Monday, May 12, 2008...were exactly the same details backing a play I had recently rolled out to my small group. We're already up 78%...but I expect to see it climb a lot higher
- Lehman Brothers, the fat-cat financial firm, was forced by Washington to file three different "100-F Documents" in a row this June...revealing details it never wanted to reveal. When my analysis uncovered its dirty secret, we turned that into a put option play that just closed with a gain of 216%.

Even before the first official **Strategic Short Report** alert went public, we saw two beta moves shoot up 120% and 130%. That's better than double your money. Twice. And that's before we even hit the streets.

I'm proud, sure.

But make no mistake. Just because my readers and I aim for bigger gains than you could get just holding stocks...that doesn't mean we play the market like it's a roulette wheel.

Why take chances, after all, if you don't have to?

## **Strict Rules That Help Ensure Your Success**

I've already proved my system for playing these unique money-multiplying opportunities can work. But there are rules of "conduct" I follow, too. Four very simple ones that help protect my **Strategic Short Report** readers from any avoidable losses. And, just as much, to make sure you get every chance to

maximize every possible gain...

### Rule No. 1: Minimize Risk

As I said earlier, when some people think of playing the downside of a crashing company, they immediately think of "short selling" the stock.

But this is a very risky way to bet on a falling stock. It can also be expensive. And the amount you can make is strictly limited.

What I love about put options is that you can control the risk. You can't lose more than you decide to put on the line. And you can decide how long you want to hold the options, right from the start.

The "other" key to cutting risk is good old-fashioned elbow grease. I simply do a lot more work to find the right shares to play against. It's that simple.

It has to be that way, when you're looking to act on details most companies would love to bury. That's why my readers and I start with the "100-F documents."

But it doesn't end there. In every alert I'll send you, I'll show you the deeper research I do between recommendations...digging deep into the numbers, asking all the questions, forcing the answers out of the data...

All before I click "Send."

If you don't have someone doing the homework for you, I agree this isn't something to just jump into blindly. But with all the work already taken care of, you'll never need to do more than decide whether you want to jump on the opportunity...make a five-minute phone call...and read off the instructions that I'll provide.

This can easily be a safer way to make money, if you're doing what I show you how to do...both in the free copy of ***Five Steps to Lock in Triple-Digit Gains Even as Stock Markets Crash*** and in every weekly ***Strategic Short Report*** alert I'll send.

### Rule No. 2: Keep It Cheap

## The Bear Market Gains Others Leave on the Table

We live in an age when companies can use the press to paint a false picture of what they're really worth...when Wall Street darlings eat themselves up from the inside out...and when companies make all kinds of promises to reporters that they can't possibly deliver.

But the "100-F documents" can reveal the truth.

Remember Qualcomm at \$1,000? It ended up trading in the mid-\$20s. If you bought the hype, you go hurt. But just by using the company's *own predictions*, you could have forecast the backslide and made a fortune.

How about Amazon.com at \$250 per share? Or Priceline at \$165? They've all fallen. Amazon collapsed to \$6. Priceline hit \$3. And anyone reading the secrets they're forced to disclose in their "100-F documents" could have seen the writing on the wall.

What the smart crowd does is take those discovered details and use them to make a fortune, playing the coming downside with highly lucrative *put options*.

The same went for the crash of PSINet, when it collapsed from \$60 to \$1 and change...or Lucent, crashing to \$2...Red Hat, plunging to just under \$5...and many more.

You can make piles of cash on falling shares just by playing the right put option positions at the right time. You only need to know where to look. *And the manual I want to send you free, **Five Steps to Lock in Triple-Digit Gains Even as Stock Markets Crash** shows you where.*

The other thing to love about using stock options to make these moves is that you can usually pick them up much cheaper than what you're used to paying for quality stocks.

Some of the moves we've already seen were as cheap as \$4 per share and less...even though, with options, you're controlling a larger portion of the underlying company's shares.

The best part about starting low like this is that it gives you plenty of room to take your gains much higher. It's a lot easier to double \$5 into \$10 than it is to double \$50 into \$100.

### **Rule No. 3: Aim High**

The best part of doing this through options is the power of options to turn even small market moves...into much bigger ones.

Each share of an option can be like owning 100 shares of the related company. Even though you're paying much less per share to get in.

That can take a small change in the price of a stock and magnify it into gains as high as 10 or 15 times larger. Sometimes even greater.

With options, that's true whether you're counting on a stock to go up or go down...as I've shown you so far in this letter...and as I show readers of my new ***Strategic Short Report*** in our weekly market alerts.

Let me welcome you into our circle of opportunity and you'll quickly see what I mean. By the way, if I don't come through the way I've promised today, it'll have cost you nothing to give my system a try.

And finally...

### **Rule No. 4: Keep It Easy**

Pros love this strategy. Billion-dollar hedge funds use it all the time.

But that doesn't mean doing this has to be difficult. With my new service and our weekly research alerts, it doesn't matter if you've never made an options play on a stock before.

I walk you through it, with every recommendation.

First, I explain why we're considering each move. Then I tell you exactly what you would want to repeat in a phone call to your broker.

Start to finish, no alert will take you more than 10 minutes to read...or five minutes to put into play. My system makes each move thorough.

But no more thorough than we need to be to get the job done.

Obviously, I do all the footwork for you. I dig up everything we need to know about

an upcoming opportunity, using the "100-F documents" and whatever else in my analysis that I can get my hands on.

With each alert, you read my summary and then decide if it's for you.

It's that simple.

You'll also get started with the easy-to-follow primer I send every new member of our little circle, ***Five Steps to Lock in Triple-Digit Gains Even as Stock Markets Crash***.

It lays out my system for you in plain terms. And then you're up and running, ready for your first ***Strategic Short Report*** alert in no time flat.

There's only one thing I'll ask from you in return.

And that's that you'll let me know if you're ready to accept my invitation soon. Because right now, I believe there's never been a better time for my strategy to work...

## **Easily the Richest Time in History**

Lots of market amateurs -- and even pros -- are worried right now about where shares are headed. Given the hype and the headlines, I don't blame them.

But the fact is what spells a crisis for some spells opportunity for others.

Especially for my ***Strategic Short Report*** readers.

*I'm watching dozens of key moves right now...connected with the next wave of credit blowouts...an explosion of credit card debt and a coming student loan lending crisis...recession-vulnerable businesses...*

Any one of them could yield the next wealth-tripling move.

I'd hate for you to miss out. Let me start by sending your copy of ***Five Steps to Lock in Triple-Digit Gains Even as Stock Markets Crash*** immediately. Inside, you'll find out...

- The one secret number that exposes companies about to bleed cash
- How to tell when company "fat cats" have tried to fluff up share prices
- How companies fake sales...and the easy filter I use to catch them
- The one big lie "blue chips" love to tell and how to gain when it gets found out
- Plus more...

I simply can't give you the full details of my five-part system here. That wouldn't be fair to my friends and paid-up subscribers in the ***Short Report*** inner circle.

But you can see everything in the free report I'll send to get you started. What's more, even if you ultimately cancel the service for a full refund, I'm going to ask you to just keep the report for yourself. You'll have the first 90 days to decide. So feel free to take your time.

*Just don't take too long.* Because I'd hate for you to miss out on the *next* opportunity I have lined up for my **Strategic Short Report** readers...

## The "Other" Way to Triple Every Dollar Before 2009

I'm convinced this next move is at least a 200% gain in the making.

And I expect it to play out quickly over the weeks ahead.

This one is a private lender -- not a bank, exactly -- that takes shareholder money and invests it in loans to small businesses. For five decades straight, it's been a solid company.

But that's changed.

See, I've been digging into this company's latest "100-F Documents"...and it's clear to me that, like the big banks and financial firms, this private business lender is *bogged down* with piles of small business loans that are at least as toxic as the "subprime" loans that started bringing down other financial stocks last summer.

In other words, just like the greedy real estate lenders, this company stuck its neck out and gave piles of cash -- *billions* of dollars -- to risky small companies that will get slammed during the current rocky economy.

Businesses that, by the way, might never have gotten a business loan from any other bank. Even in the best of times. Worse, most of these mini "investments" are locked into consumer and service sectors. And many of them are already taking a recessionary pounding, financially.

Those losses get passed up to this lender.

And when this news finally hits Wall Street, I'm convinced this otherwise highly respected firm is going down for the count. When it does, my **Strategic Short Report** readers will have had the chance to put my *put option recommendation* in place. The same move, of course, you can read about immediately in a second free report I want to rush you.

It's called **The Single Best "Short Report" Play in the Market Right Now.**

It reveals the name of this next company we'll play. And it's yours at no charge. Just to thank you for giving my new weekly urgent alert service, **Strategic Short Report**, a try for the next 90 days...risk free.

So let's run through this invitation just one more time...

## What You'll Get When You Join Us...

Too many **Strategic Short Report** readers acting on the same information would

make some of my recommendations move too quickly. And that wouldn't be fair to paying subscribers.

So I'm allowing only the next 1000 people I hear from a chance to get in at this time. I may open that circle up again in the future, but we want to do this right.

So for now, the limit stands firm.

If I hear from you in time for you to qualify to get in, the first thing I'll do is immediately rush you a copy of ***Five Steps to Lock in Triple-Digit Gains Even as Stock Markets Crash***.

This is your thorough primer on how to get started.

It immediately gives you everything you need to know about my system and how it works. All in simple steps and plain language. You'll find it a clear, easy read. With answers to every question you might have about how this works.

I'll also include a free copy of the second free research report we talked about, ***The Single Best "Short Report" Play in the Market Right Now*** -- which immediately gives you my newest research on a recommendation I'm convinced could get you started with a gain of at least 200%.

Then I'll add you automatically to my list for receiving weekly ***Strategic Short Report*** alerts. These will arrive in your e-mail inbox once a week, usually Friday, but sometimes earlier, if the news warrants it.

In each alert, I'll name all the companies to watch...I'll catch you up on what's happening with all our current plays...and I'll give you a full picture of what we're looking at next.

Some plays will work out very quickly. Others we'll take our time with as they evolve. Either way, I want you to be ready to act as soon as you get my reports. Each time, I'll give you the exact "action to take" phrase you can share with your broker.

All you have to do is pick up the phone, dial, and read the recommendation verbatim. Then sit back and let the move play out. I'll send you every piece of news and word of every market shift on every open position.

There's one more thing.

## 58 Dates That Could Be Making You Rich...

***These "100-F document" deadline dates could start making you rich immediately, just as soon as you're ready...***

Once a month, I'll also send you a full new research report on a favorite play. This is on top of your weekly alerts, at no extra charge. It's included with your subscription. And each of the extra monthly reports will give you an even fuller profile of our latest favorite plays.

And of course, you can access all of this -- anytime you like -- archived on the private members-only **Strategic Short Report** Web site. I'll send you a private password immediately, just as soon as you accept my invitation.

How much should something like that cost you?

## **\$10,000 Worth of Research at a Fraction of the Price**

As I said, I'm not the only guy doing this work.

Others track this side of the market. And do a very good job, too. But as I'm sure you can imagine, doing this kind of research doesn't come cheap.

To get diamonds, you've got to dig.

And of course, I happen to know that at the top-ranked private fund where I got my start, we shelled out \$10,000 each year for the research service we used.

But **Strategic Short Report** won't cost you \$10,000.

In fact, I have a subscription to a research service that costs \$8,000 per year. But that's a lot more than I'll ask from you before you can join our inner circle of subscribers.

See, the fact is just by inviting a certain number of members into these opportunities, my publisher and I are able to spread out the costs for the research service...for producing and laying out my reports...for even my own fees as head analyst.

That makes it possible to let you into a **Strategic Short Report** slot right now for just \$1995 per year. And keep in mind that includes a special opportunity alert EVERY WEEK for a full year.

Plus the extra monthly research reports you'll also get each month...your free copies of **Five Steps to Lock in Triple-Digit Gains Even as Stock Markets Crash** and **The Single Best "Short Report" Play in the Market Right Now...**and unlimited access to the members-only **Strategic Short Report** Web site.

If you're not a subscriber already, I'll give you a FREE subscription to the highly praised and widely read **Daily Reckoning**. On top of that, you'll get elite access to the *Agora Financial Executive Series*. The Executive Series is a members-only dispatch of two profit-laden e-mails, the **Rude Awakening** and the **5 Minute Forecast**. These dailies will alert you to specific investment research and

recommendations from across the entire world of investment opportunities that Agora Financial covers.

And of course, everything you get when you accept my offer is protected by my publisher's **100% Satisfaction Guarantee**:

***Try Strategic Short Report with no risk for the next 90 days. If you're not happy with my research for any reason, just tell my publisher and he'll immediately send you a full refund. Every penny. No questions asked.***

You'll keep everything I send. And if you're not satisfied after 90 days, just tell us and you'll still be entitled to a full refund on the remainder of your subscription. I'm sure that sounds like a square deal.

So now there's only one thing left...

*Let me hear from you now and you'll lock in your place our **Strategic Short Report** "insider's circle."*

I hope to hear from you soon,

**Dan Amoss, senior analyst**  
***Strategic Short Report***

**P.S.:** My next alert comes out this Friday. And the next "100-F document" filing deadline is Tuesday, March 31, 2009. The last time I sent out a special invitation like this, we saw our move rocket up 462%. Some of the readers already getting my alerts wrote in...

"I just sold 10 contracts of LESMH for \$26.45 which I purchased for \$4.47 for a total gain \$21,980!! This is very exciting stuff...keep em coming like that if you can. I really appreciate your hard work, in depth research and thorough detailed coverage. Awesome trade Dan! You are the man!"

-- David Y.

"A cool \$200,000 profit later, I'm a SSR disciple! Spectacular call... keep 'em coming!"

-- Wilson R.

"Purchased your Lehman reco 4/25/08, 6 contracts @ 4.80... actual profit less commissions... 442%! I your Lehman action so I added 7 JAN 35 puts and 2 JULY 20 puts. Sold the July yesterday for 84% profit... and the JAN today for 157% profit, each held only 30 days... Thanks Dan!"

-- B. Herberts

"Man, I owe you such a big box of beer... optionsXpress executed my buy order on the RJF Nov. \$30 put, and in ONE

DAY, it's up \$1.30! Man, you're beautiful! And your M.B.I.A., and the H.B.I. puts are still soaring, even as the companies are sinking... PLEASE keep up the fantastic work!"

**-- Vaughn M.**

There's a good chance it will produce our next money-doubling or tripling opportunity. To make sure you don't miss the details, I need to hear from you today so we can make any market moves related to the next "100-F document" filing deadline on Tuesday, March 31.
