

# Texas Company Tapping \$2.8 Trillion Oil Reserve... Under the Eiffel Tower

Tiny company from Dallas preparing to extract 40 billion barrels of crude oil from beneath Paris, France...

Discovery big enough to fuel U.S. demand for 5.2 years, according to Energy Information Administration...

Estimates show 4,620% gains for investors who get in now...  
*before this oil comes to market...*

---

Dear Reader,

It could be the richest oil deposit in Western Europe.

But very few even know of its existence... yet.

Even leading oilmen in the U.S. have no idea.

Because... well... *who ever thought of looking for oil beneath the Eiffel Tower?*

Indeed, while Parisians sip coffee and nibble croissants in Montmartre... as tourists stroll through the Louvre, and walk along the Left Bank... there's an ocean of sweet crude oil bubbling directly beneath their feet.

The French Oil Ministry has confirmed more than 40 billion barrels.

It's enough to fuel total U.S. oil demand for 5.2 years, according to the Energy Information Administration.

Enough to fill more than 2.54 *million* Olympic-sized swimming pools...

And 27 times more oil than ExxonMobil produces annually...

Perhaps most amazingly, the rights to every drop of this oil now belong to one little company from Dallas, Texas!

When it brings this mother lode to market later this year, the company will multiply its oil inventory 5,632-fold.

No wonder Goldman Sachs and Barclays are quietly building positions in the stock before the big event.

And no wonder they're keeping this news to themselves - not telling a single one of their retail clients.

Over the next few minutes you'll discover all the details of this opportunity.

And you'll learn how you could turn a small speculation of \$5,000 into \$231,000 starting just a few weeks from today.

But you must act right now.

Let's get right to the details...

## **A Global Hunt for Oil Pays Off... BIG TIME**

As many people know, American oilmen have been drilling in Texas for generations. They've scoured the entire state and pumped billions of barrels.

Competition for drilling rights is fierce, and returns hard to come by.

So a few years ago, one of the state's leading small oil companies made a bold decision.

The idea was to break out and send their geologists around the world in search of a truly game-changing discovery.

After months of exploration, they returned with some shocking news.

If the data were correct, they had discovered an extremely large accumulation of untapped crude oil...

Not in the Middle East...

Not in some Latin American dictatorship...

Not thousands of feet beneath hostile seas in the North Atlantic...

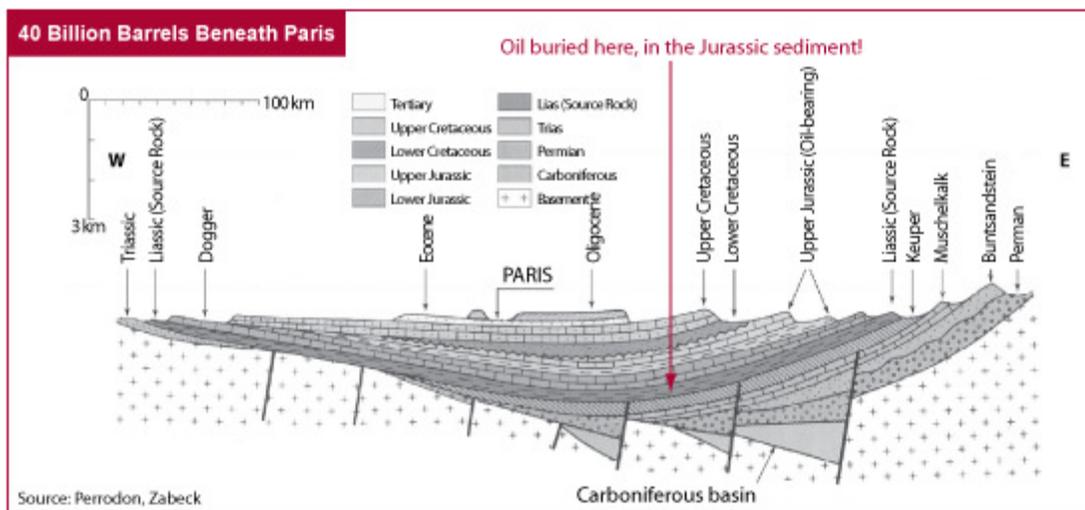

But locked in the geological formation running directly beneath the city of Paris, France...

## **The Forgotten Treasure beneath the City of Lights**

Known as the Paris Basin, this layered formation juts thousands of feet into the earth. It forms an oblong bowl 310 miles long and 186 miles wide.

At the basin's surface you'll find vineyards producing the finest wines in the world, along with gourmet cheeses and other natural wonders. (Dom Perignon Champagne comes from a small town resting atop the basin.)

But beneath that gilded soil - with the Eiffel Tower near its epicenter - the geological team from Texas discovered huge crude oil deposits. (Most of it flowed through the formation's Jurassic limestone layer - the darkest layer in the diagram below.)

Their estimates showed 30 million barrels, at least. But they needed more time, and money, to complete their surveys.

## When a Small Company Risks Everything *and Wins*

So the company (we'll call it the "Tiny Texan") decided to take an enormous risk.

It sold off its U.S.-based operations. Every oilfield, well and piece of equipment went up for sale.

Then they took the millions in proceeds and poured them into the Paris project.

Shortly after doing so, the company confirmed the first 30 million barrels. (Just as quickly, it purchased the rights to that discovery from the French Oil Ministry.)

But what nobody knew at the time was just how big the discovery would become.

*The geologists hadn't actually confirmed the physical limits of the accumulation.*

## Discovery Grows from \$5.04 Billion... to \$2.8 Trillion

So the company decided not to bring the oil to market - yet. The

geologists continued surveying.

Their suspicions proved correct: There was indeed more than 30 million barrels in place.

As they followed the oil-flows outward, the estimated size of the reserve grew... to 72 million barrels... 350 million barrels... 1 billion barrels... 3 billion barrels... 12 *billion* barrels...

The data were breathtaking. And so were the potential revenues as they swelled from **\$5.04 billion... to \$24.50 billion... \$70 billion... \$21 billion... \$840 billion... and counting.**

Keep in mind that the Tiny Texan had the cash to buy all the drilling rights thanks to the sell-off of its American assets years before.

And thank goodness it did.

Because now - after months of surveying - the company's investment is finally ready to pay off.

Bottom line: This tiny, \$100 million wildcatter from Dallas now sits atop 40 billion barrels of crude oil worth *\$2.8 trillion dollars*.

The company will bring this mother lode to market just days from now.

When it does, the stock could skyrocket based on fundamentals alone (not to mention what'll happen once this story gets out to the mainstream American financial press).

Here's why...

## **Billions of Barrels... Not Priced into the Stock!**

In November 2009, the Tiny Texan will switch on Oil Well #1, on the outskirts of Paris, tapping into the first 30 million barrels.

This historic event would be enough to triple the company's oil inventory. And it'll certainly be enough to jolt the bottom line, and launch this story into the mainstream investing media.

The importance of getting in before the big event cannot be

## **How this Little Texas Company "Disappeared" from Wall Street's Radar Screen Five Years Ago**

Five years ago, the Tiny Texan oil company "cashed out" of all its U.S. holdings to explore and develop its massive discovery in France.

The day it sold its last American oil well, the company literally dropped off Wall Street's radar screen.

If you were a stock analyst tracking domestic oil companies' U.S. operations, the "Tiny Texan" ceased to "exist."

After years of prominent positioning in the domestic rig counts provided by Baker Hughes, the company's drilling activity suddenly stopped.

From that moment forward, even petroleum analysts following U.S. drilling trends lost track of the company.

And Wall Street completely lost track.

While that's still largely the case, the company has begun reappearing on the radar screens at a handful of major Wall Street institutions. They include Goldman Sachs, Barclays and Palo Alto

overstated.

But this is merely the beginning.

The Tiny Texan has an additional seven wells coming online right afterwards. They're located to the south of the city, too.

Combined, the first eight wells will tap into 66 million to 72 million barrels worth about \$4.6 billion. **That's enough to drive the company's market cap up 4,620% from current levels around \$100 million.**

In other words, the stock could soar 46-fold, *based on this initial jolt to the fundamentals.*

Wall Street hasn't calculated any of this oil into the stock's price yet. (Nor has it calculated the remaining 39 billion-plus barrels into the price!)

And that's exactly why a handful of major Wall Street institutions are quietly, slowly building positions in the company now...

## **Goldman Sachs, Barclays and Vanguard: All Buying this Stock with their Own Money... But Not Telling Investors**

Goldman Sachs just bought 1.07 million shares for its house accounts.

Barclays bought 1.04 million shares with its own money.

Palo Alto investors bought nearly 2 million shares.

Yet none of these big firms will tell its retail clients about the opportunity.

They're not even rating the stock, or following it publicly. You simply won't hear about this opportunity from Wall Street.

When confronted with this fact, Goldman spokesman Robert Kenner replied:

*"Goldman Sachs research division does not cover [the Tiny Texan] and we do not discuss plans regarding future analyst coverage. Also, we do not comment on companies that are individual holdings of the firm."*

And why would they?

By keeping this opportunity from regular investors, they stand to keep the biggest gains to themselves. (Some things never change.)

Investors.

Just days from now, they stand to pocket a fortune when the little Texas company finally brings its mother lode to market. (Still, they won't tell regular investors!)

For details on how you can join in the coming gains – up to 4,620% – please read on...

But a few regular investors will indeed have the chance to profit from this situation.

And judging from similar cases, they could pocket even more than 4,620%...

## Nothing Drives an Oil Stock Higher, Faster...

Nothing sends an oil stock soaring faster than a big discovery.

Earlier this year, TXCO Resources discovered oil in the Fort Trinidad Field of Texas. The stock jumped 86.9% in 15 days.

Likewise...

Edge Petroleum struck oil in the Fayetteville Shale of Arkansas. And the stock jumped **210%** from March 18-20, 2009.

Arena Resources discovered oil in the San Andres Field in west Texas. The stock bolted **104.33%** between February and June 2009.

Eden Energy found oil in Colorado's White River oilfield. The stock climbed **13,983%** in nine months. (That would have turned \$5,000 into \$699,150.)

Perhaps the greatest example of them all was Standard Oil. The company struck oil in the Bolsa Chica fields of California and the stock climbed **125,900%**. This discovery helped to make John D. Rockefeller a household name.

Now the Tiny Texan has discovered more than 40 billion barrels worth some \$2.8 trillion.

Indeed, the long-term implications are staggering.

Because here's the thing...

## Do You Really Think Oil Is Going to Stay THIS CHEAP?

It's no secret that oil just jumped to a new seven-and-a-half-month high.

But experts, including oilman T. Boone Pickens, think this is just the beginning.

According to Bespoke Investment Group: *"If oil is able to break out above these short-term highs, there isn't much in the way of resistance until the \$90 mark."*

Now the International Energy Agency is scuffling to stay ahead of the escalating supply-and-demand imbalance.

On June 11, the advisor to 28 of the world's biggest oil consuming nations was forced to increase its global demand estimate for 2009 by an additional 120,000 barrels... *per day*.

Meanwhile, the biggest oil fields in the world – in Saudi Arabia, Mexico and Russia – have either reached maximum production or are declining rapidly.

According to the IEA, global reserves are sliding at an astonishing 6% every year.

But on the outskirts of Paris, France, a tiny oil company from Texas has discovered what could be the perfect solution.

It's a massive reserve containing 40 billion barrels of crude oil – and it all belongs to this single company.

To find out how it could drive shares much higher just days from now, please read on...

The smaller the oil company - and the larger the discovery - the bigger the potential gains for investors.

## Why Gains Could Go Higher than 4,620%

For example, Brazil's Petrobras Energia is a \$15 billion company.

The Tiny Texan is about 1/100th the size, with a market cap of around \$100 million.

Petrobras discovered 5 billion barrels of oil in its Tupi Field last year, and the stock soared 207%.

The relatively small Tiny Texan has discovered eight times more oil, and the stock has risen 15%.

Just looking at the discoveries, you would expect the Texan to climb eight times higher - about 1,656%.

But considering that the company is so much smaller than Petrobras, you would expect that number to rise exponentially.

That's why 4,620% could be a conservative estimate here.

**But why didn't one of Europe's major oil companies such as Total pounce on this oil long ago?**

The answer: They didn't have the right equipment.

*You can't simply drill an oil well under the Eiffel Tower and start filling up oil barges on the River Seine.*

To access oil beneath a major world landmark, you need special equipment, and special expertise.

And that's exactly what the Tiny Texan is bringing to the equation, all the way from America...

## U.S. Technology Comes to France on a Grand Scale

For the past several years, oilfield engineers in the U.S. have been perfecting an amazing new technology.

They call it "horizontal drilling." Here's what makes it so powerful.

With traditional oilrigs, you can only drill straight down - vertically.

With horizontal drilling, you start by drilling straight down. But then you can turn your drill sideways, thousands of feet underground, and continue drilling for miles.

Since its introduction in the 1990s, horizontal drilling has produced

billions in profits for oil companies worldwide. But American oilmen have taken the technology to whole new levels.

According to the Energy Information Administration, these American advances have increased per-well production by 700%. They have also *slashed* per-well expenses by 50%.

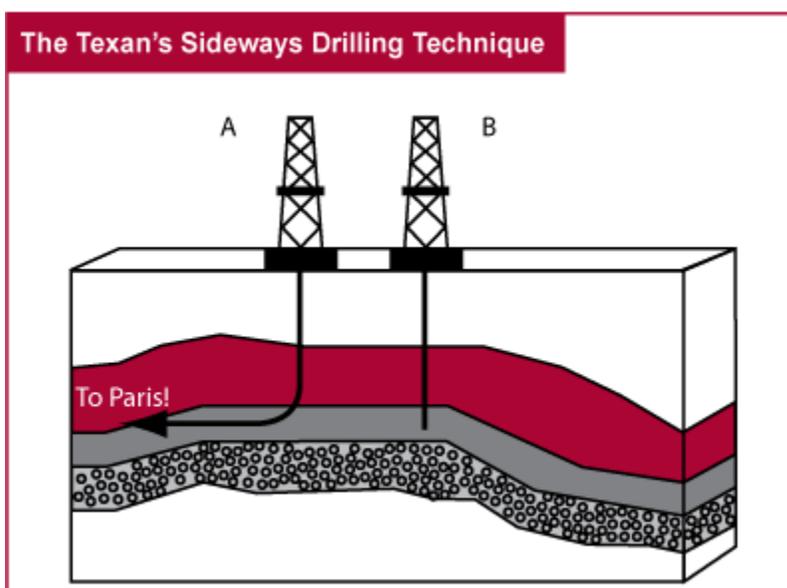

But how will these advances help the Tiny Texan vacuum up all that oil beneath the Eiffel Tower?

## Legally "Steal" 40 Billion Barrels from the French

The company will start by drilling vertical wells on the outskirts of Paris.

From there, it will run horizontal wells straight into the Paris reservoir... *attacking the oil from the side!*

This way, the company will leave the city of Paris entirely undisturbed... while gaining easy access to the \$2.8 trillion prize. (See "Well A" in the diagram below.)

Parisians can go on about their daily business, completely oblivious! And the Tiny Texan can go about the business of making money, and lots of it.

According to one noted **European Oilfield Geologist** ...

*It's the perfect solution, and one that could allow this small-cap Texas oil company to produce billions in profits, starting with the first well coming online later this year. The risk they took could pay off many times over.*

Indeed. The first eight wells alone could produce enough to send the stock catapulting 4,620% later this year.

The long-term gains could soar even higher.

But here's the amazing thing.

Even without the Paris discovery, this little company would make an excellent speculation right now.

## **Why this Company Is Already Making Big Money**

When the Texan cashed out of its U.S. holdings years ago, it didn't put all of that money into Paris.

The company poured millions into other parts of the world, too, where the "third generation" oilfield technology from America would give it an advantage.

The company bought up drilling rights across Europe and Asia, to complement its Paris holdings.

And it has been milking those Eurasian holdings for millions... for years...

## **2.2 Million More Oil-Soaked Acres across Eurasia**

The Texan controls an additional 2.2 million acres across Eurasia. (It controls 649,096 acres and counting in the Paris Basin.)

These additional lands hold millions more barrels of crude oil, too, according to the geological surveys.

The company finds itself in the cat bird seat. It can either bring those billions of barrels to the surface. Or it can sell the rights to the oil for even more cash. (Last year alone, it sold more than \$50 million in rights.)

The man who'll make the decision is the company's dashing young CEO. He's an American oilfield engineer and former head of British Petroleum's North Sea Operations.

And he believes these additional Eurasian resources, combined with the Paris discovery, will make this a "breakout year" for the company.

Fact is, the Texan's Eurasian holdings are already driving the company's revenues sky high.

## **Soaring Revenues for Five Straight Years**

*Source – Thomson Reuters*

The Tiny Texan isn't just a good story. The company has been steadily driving revenues higher... for five straight years.

According to data from **Thomson Reuters**:

*The firm has grown revenues by an average of 30.88% since 2003 - through all markets - showing top-line stability you don't often see in a typical resource company, let alone an oil company.*

The company clearly knows how to generate cash... and keep it.

Just since December, the Tiny Texan has slashed debt 43%. And management used the swoon in last year's oil prices to slash overhead by 61%.

The company doesn't trade on the pink sheets or over the counter. It trades on a major, regulated U.S. exchange, the Nasdaq. And its track record of success dates back to the 1950's.

When the first well comes online outside of Paris, it will mark an historic turning point for the company... and its shareholders.

For investors with risk capital, this speculation has a real chance to turn \$25,000 into as much as \$1 million (a 4,620% gain). With Goldman and other big players moving in, the shares have already darted 15%.

That's why I'd like to rush you an urgent report on this opportunity right away.

It's called ***Profits in Paris: Earn 4,620% from this Secret Oil Discovery.***

Here's why you won't pay a dime for this research.

## **How to Take Advantage of this Opportunity Now**

My name is Mike Ward.

I've spent years in the trenches of high finance, and today I'm the publisher of a very different kind of investment newsletter called ***The Money Map Report.***

Each month, our readers receive an exact "road map" to the markets. As with the Tiny Texan, we show them where the big money flows are headed - from investment banks, governments and private investors.

Get ahead of a capital shift of global significance and you can make money, almost automatically, as that capital creates demand... driving prices higher every time.

Consider...

Our readers got in ahead of the agriculture boom, and saw gains of **389%** on the hottest "fertilizer" play on the planet...

They got in ahead of the Chinese steel boom and were able to book **100%** in less than two months.

*The Money Map Report* opened their eyes to an emerging run on aluminum, leading to **857%** gains..

But this time around, the gains could be much bigger.

We're talking about \$100 million oil company - trading around \$6 - that's about to "pop the cork" on more than 40 billion barrels of crude oil - worth \$2.8 *trillion* dollars.

This situation is unprecedented in the history of investing.

And you'll get all the details in ***Profits in Paris: Earn 4,620% from this Secret Oil Discovery.***

You'll receive this report free, just for *trying* our research.

But there's something else I'd like to send you for free..

## Discover "The Cisco of the Smart Grid"

As you probably know, many people got rich from the emergence of the Internet.

The best example might be Cisco Systems. The Internet-hardware company handed investors 16,637% gains from 1990 to 2000.

But some investors will get even richer off the emergence of a new internet.

This one will be 1,000 times bigger than the first, according to a current Cisco VP.

The new internet won't handle emails and web pages. It will route energy between power plants and customers in the most efficient way possible.

Many call this new network the Smart Grid.

As *CNET* reports, the new network will add billions to the bottom lines of both utility companies and customers each year.

"Building the smart grid means adding computer and communications technology to the existing electricity grid. With an overlay of digital technology, the grid promises to operate more efficiently and reliably... Much like computers and routers manage the flow of bits on the Internet, smart-grid technologies use information to optimize the flow of electricity."

By increasing efficiency, the power companies will consume less fuel.

And that means producing fewer emissions.

No wonder Congress just approved \$11 billion for the Smart Grid!

And no wonder experts see the Smart Grid as a \$100 billion marketplace for new technologies, ideas and equipment.

For investors in one little company, all of this could mean enormous gains.

**We call this fast-emerging company the "Cisco of the Smart Grid."**

While Cisco provided the routers and switches for the first Internet, this company provides the data "hubs" for the Smart Grid.

These hubs route information, and energy, between power plants and customers - in real time. And they're already controlling the flow of power in places like Tennessee, Florida, Ontario and California.

A Southern California Edison Vice President calls the hubs "an essential part of providing clean, cost-effective technology solutions to further enhance the reliability of the electric power grid."

But the company is just getting started. It's looking at potential deals with dozens of other major metropolitan power companies. And as each new customer signs on, the company's earnings will spark higher.

Consider that the new Smart Grid promises to grow 1,000 times the size of the original Internet, you can see the profit potential. The gains could be positively Cisco-like.

You'll find all the details of this amazing opportunity in ***The Five Stocks that Can Ensure Your Retirement.***

We'll rush you this report right away, when you agree to sample our research.

## **Who We Are... and How We Help You**

We're going to great lengths to give you this high-level research because:

1. At ***The Money Map Report***, we believe every individual deserves a chance to retire much richer thanks to his or her investments... instead of poorer.
2. We're on a mission... A mission to help wealth builders make big gains, through all markets, simply by following the big money flows, wherever they may lead around the world.

You see, ***The Money Map Report*** helps globally minded individuals make sense of this crazy world - and ensures that they don't get eaten alive by these insane markets.

Our flagship investment-advisory letter delivers approximately five expertly researched articles per month. Each one details a new way for you to make - or save - big money.

Investment Director Keith Fitz-Gerald leads our Global Investing Team, which includes seven of the savviest minds in the financial world today.

Our team includes a tough floor trader from Chicago... former director of a global private-equity firm... the former Vice President of Global Investing for Merrill Lynch... the former U.S. Treasury Department representative to Europe... and the former head of America's leading technical-trading company...

Together, they bring decades of hard-won experience to the **Money Map's** team. And that's what makes our Trading Portfolio so uniquely powerful.

As of this writing, our readers are sitting on sizable gains in...

An energy company that has built the world's first pipeline to transport biodiesel... **Expected gains: 122%...**

A food company yielding 6.2% and poised to double, that serves as a perfect inflation hedge and China play all at once... **Expected gains: 100%...**

The perfect way to collect steady income from the new economic marriage between Brazil and China... **Expected gains: 50% this year...**

A pure currency play you can make online in 10 minutes - without trading volatile currencies - for protecting against a weakening dollar, and doubling your savings. **Expected gains: 300%...**

You'll gain immediate access to our model portfolio once you join us.

You'll know exactly how to play each opportunity for maximum gains. Because we'll provide detailed instructions on exactly when to buy, when to hold and when to sell.

Reading **The Money Map Report** really can make you a richer and smarter individual.

But you don't have to take my word for it. Here's what our readers are saying right now...

## How Our Readers Are Already Making Money

Reader Thomas P. DuGroat of Plainview, AR, wrote to tell us:

"I just subscribed to the *Money Map Report* and already have a \$1,100 profit after just four days. Thanks!"

And Martin Corman from Atlanta writes:

"I'd swear Keith's got some sort of crystal ball! He consistently delivers prescient commentary and profitable recommendations months before anyone even thinks to tackle the stuff..."

Reader Tim Wozniak from Sarasota says:

"Yours is the first newsletter I have profited consistently from. I really appreciate and value the global perspective."

Here's what Robert Behmens from Portland, OR, had to say:

"Simple, easy-to-understand recommendations and profits in the pocket. What more could I want?"

This is just a small sample of the reader feedback we receive on a daily basis. Of course we receive "constructive criticism" at times. But the vast majority of letters we see sound like these. And no wonder. Our readers simply make more money than they ever did following Wall Street or their own "gut instincts."

They booked 202% on the uranium run up...

They bagged a quick 213% on the Brazilian oil run up...

They had the chance to pocket 170% on "boring" coal...

They even discovered the fastest growing insurance company in the world and closed out for 1,804% gains... just before the markets went south... The list goes on.

And it's just getting bigger thanks to opportunities like this one...

## **Collect Cash from Europe's "Royal Coffers"**

We've found what could be the greatest income-producing investment ever.

But you won't hear about this from your broker, or the *Wall Street Journal*.

You see, 153 years ago, Queen Isabel of Spain decreed the creation of a "Royal Coffer." By paying out money to Europe's most powerful families on a regular basis, this "bottomless" cash supply would ensure that those families stayed rich no matter what.

They have been tapping this bank's vaults for generations now, collecting money whenever needed.

And **Money Map** banking expert (and former U.S. Treasury official) Martin Hutchinson has found a completely legal way for Americans to

tap into this same royal cash source for the first time.

One simple move with your regular broker can ensure that you, too, pocket an extra \$4,000 every month from now on... *automatically*.

You'll discover the details in ***How to Get Guaranteed Cash Payments Today***.

This report comes free with your trial subscription to ***The Money Map Report***.

And of course, you'll also receive everything else mentioned so far.

## **A Quick Summary of What You'll Get**

Here's a quick reminder of the special reports you'll receive when you sign up:

**Research Report #1: Profits in Paris: Earn 4,620% from this Secret Oil Discovery:** Just days from now, one of America's oldest oil companies is preparing to "pop the cork" on \$2.8 trillion in new discoveries. Here's how to get in now. You'll get all the maps, surveys, data and of course the ticker symbol and precise instructions for maximizing gains.

**Research Report #2: The Five Stocks That Can Ensure Your Retirement.** Don't take unnecessary risks... betting on "if" propositions in the markets. These five recommendations are for serious wealth builders looking to ensure their retirement all with a small grub stake. Estimated gains for each recommendation are geared to make you 4 to 6 times your money.

**Research Report #3: How to Get Guaranteed Cash Payments Today.** Not in years have we seen such potential to make huge, steady gains from a special kind of dividend. The yield curve on dividends and bonds has reversed. And Spain's royal bank will ensure that you, like the richest of Europe's elite, continue receiving cash payouts regardless of what the S&P 500 does next week, or next year.

But even this is only the beginning.

## **More than a Newsletter – a Complete Investing Strategy**

When you agree to try ***The Money Map Report***, you'll get our complete investment strategy – the only one you'll need – for securing and growing your wealth exponentially.

Your subscription includes:

- **Continuous Portfolio and Market Updates...** so you know exactly where we stand on our select portfolio of current

recommendations...

- **Special Alerts and inter-month recommendations...** You'll be able to lock in gains and minimize losses with our up-to-the-second reporting...
- **The latest Investor Briefings...** Discover new trends just as we identify them, and prepare for coming potential profit waves, one after another...
- **Our proprietary 50/40/10 Portfolio strategy (it crushes outdated "diversification" models)...** Forget traditional models of diversification. The crisis has changed everything and we've created the perfectly adapted solution.
- **Immediate Safety Alerts:** When it's time to exit a position and lock in gains, you'll get an instant alert with precise instructions on exactly what to do.
- **"In Country" Reports from China and Other Emerging Countries...** Investment Director Keith Fitzgerald lives part time in Japan and travels regularly throughout Asia. Here, his connections in industrial, political and financial circles put you onto the best investments first... for the biggest gains.

There's never been a more critical time to put your money to work - and at least see what **The Money Map Report** has to offer.

And please be aware that we've cut the price for all of this to the absolute bone... just \$99 per year!

But there's something else I'd like to send you for free when you subscribe.

You probably know that the Obama stimulus bill came with a \$787 billion price tag. It's the biggest spending program in U.S. history. The stimulus program is 10 times larger than the 1947 Marshall Plan to rebuild Europe after World War II!

Only this time, all the money will go into American projects. The bill will pump \$120 billion into infrastructure. It will pour \$11 billion into the smart grid. Some \$45 billion will go into alternative energy. And \$16 billion goes to transportation and security...

And our research indicates that some **\$484 million will flood into one little American company** with the most powerful facial-recognition software in the world.

The company's technology provides fail-safe protection from intelligence breaches and terrorist attacks... and it's already helping the company drive revenues higher by 367%.

You'll get all the details in our readers-only report called

## ***Profiting from the \$787 Billion Stimulus Boom.***

And as our newest reader, you'll pay nothing for this report.

In fact, please allow me to make a suggestion...

## **Why You're Getting HALF OFF the Normal Price**

Normally, we charge \$99 for an entire year of this market-beating research.

And considering that even one research report from a Wall Street firm can cost thousands of dollars, we think it's a very fair deal.

But here's the thing.

We have just weeks left until the Tiny Texan flips the switch on Well #1 and brings that \$2.8 trillion mother lode to market. There's no time to waste here.

So in order to remove any barrier you may have to trying our research - and getting in on this historic opportunity - I'm slashing our price in half.

If you agree to take a trial subscription to ***The Money Map Report*** right now, the cost will be just \$49.50 - about the cost of a pair of decent running shoes. (On a monthly basis, it's about what you'd pay for one fancy coffee drink at Starbucks: \$4.12!)

A great deal, I think you'll agree.

But let me make it even better, by removing all the risk for you...

## **Let Me Remove All the Risk for You**

I know there are a lot of Wall Street firms out there promising the moon. And then when you see their actual research, well, it can be a major letdown.

Pardon my bluntness, but that won't happen with our research.

However, for your benefit I would like to offer this safety net:

Go ahead and claim your trial subscription, along with everything I've mentioned. Read the reports. Review the newsletter.

Paper trade an investment or two. And then if for any reason you're not thrilled with our work, simply contact our Reader Services Dept. within 45 days and receive a full refund.

Either way, you'll be free to keep everything you've received up to that point, including...

**Profits in Paris: Earn 4,620% from this Secret Oil Discovery...**

**The Five Stocks That Can Ensure Your Retirement..**

**How to Get Guaranteed Cash Payments Today...**

**Profiting from the \$787 Billion Stimulus Boom**

But there's one more reason to act right away.

The company we reveal in *Profits in Paris* isn't Exxon, BHP Billiton or Total.

It's a small, under-the-radar firm with a market cap of around \$100 million.

## **Why We MUST Limit Participation to the First 500 Who Respond**

Having too many investors piling into a company of this size could easily drive the price higher. And we're not in the business of driving stocks higher - we're in the business of *riding* them to the moon.

That's why we can only accept the first 500 readers who respond to this particular letter.

Once we reach that limit, we must close the doors.

So if you are interested in booking potential 4,620% gains on the Tiny Texan, please claim your trial subscription right now.

You can do it in about three minutes, for just \$49.50.

All you need to do is [click here](#) or call 800.585.0950 or 1.915.855.5541 and mention Priority Code: **EMMRK915**. We'll rush our Welcome Kit to you right away, and send you the reports immediately. I look forward to welcoming you as our newest reader.

Sincerely,

Mike Ward  
Publisher

***The Money Map Report***

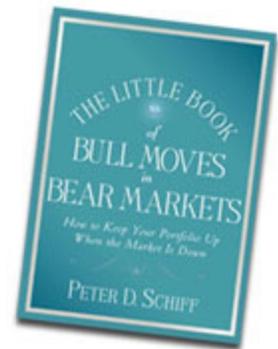

P.S. Remember, participation in this opportunity is strictly limited. We can only accept the first 500 readers who respond to this letter. Simply **CLICK HERE** to lock in your subscription. Waiting even an hour could mean missing out entirely on what promises to be a massive windfall.

P.P.S. Considering the urgency of this situation, we've also made your decision easier by lowering the subscription cost to just \$49.50

- HALF OFF the normal price. And remember, if for any reason you're not delighted, simply let us know within 45 days and receive a full refund. But keep everything you've received as our way of saying thanks for trying our research... and that includes the *New York Times* bestselling book below!

P.P.S. GET THIS FREE 263-PAGE BESTSELLER, TOO!

Respond now and receive ***Bull Moves in Bear Markets***, one of the most important investment books in a generation. Written by Money Map friend and Euro Pacific Capital President Peter D. Schiff, this *New York Times* bestseller reveals what's REALLY going on with the economy now, plus 26 ways to maximize your gains throughout the rest of the Great Recession. It's yours free if you **SIGN UP** now!
